

Mark Tant

studied Experimental Psychology at the Catholic University of Leuven (Belgium), obtained an MSc Cognitive Neuropsychology at University of Essex (UK) and his PhD in Psychological Sciences at the Rijkuniversiteit Groningen (The Netherlands). His field of expertise is vision, vision sciences and related cognitive processes. During his PhD he studied the effects of Homonymous Hemianopia and other visual disorders caused by brain damage on driving performance.

Mark is a researcher and neuropsychologist at the Belgian Road Safety Institute, CARA department. The CARA department is the Belgian centre for fitness to drive and vehicle adaptations. In its function as evaluator of fitness to drive, CARA is also involved in National and International research projects, also related to vision, and is an appreciated consultant in National and European policy making concerning driving licence and associated medical standards.
