

Title of Presentation

British and Driving with a BiOptic in Ohio

Abstract

Many USA States like Ohio provide a thorough process to enable certain low vision individuals to drive safely through the use of BiOptics technology. This presentation will reflect a personal experience on how this capability in Ohio, which is inexistent outside the US, can positively impact lifestyle. Using input from the various specialists, we will discuss the process used by Ohio State to deliver a driving license and ensure safety. We will recommend that this successful model be reapplied in other countries to enrich the lives of thousands of low vision individuals worldwide.
